

ImmuniWeb[®] Application Security Testing Platform & PwC's leading Cybersecurity Capabilities

A joint business relationship provides clients with access to High-Tech Bridge's innovative application security platform ImmuniWeb[®] for external and internal web application assessments together with PwC's market leading Threat and Vulnerability Management services.

Application Security Risk and Challenges

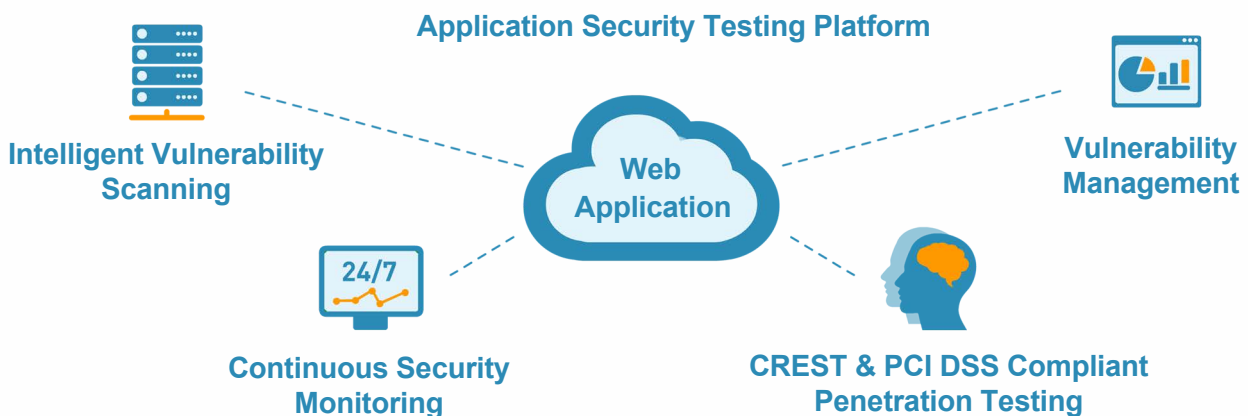

Gartner Hype Cycle for Application Security 2016 says that Applications, not the infrastructure, represent the main attack vector for data exfiltration. ImmuniWeb[®] Application Security Testing platform helps our customers to monitor, detect, mitigate and prevent web application security risks in the most reliable and cost-efficient way.

PwC's World Leading Cybersecurity Services

PwC is ranked as a leader in Security by Forrester and is recognized by Gartner as the largest professional security consulting provider worldwide. PwC operates in Switzerland one of the 55 forensic laboratories in 42 countries and has one of the most capable Cybersecurity practices in Switzerland providing clients advanced services from Strategy through execution.

The partnership between PwC and High-Tech Bridge gives clients access to the innovative application security platform ImmuniWeb[®] together with PwC's world leading Cybersecurity services and the market leading Advanced Cyber Defense capabilities.

ImmuniWeb[®] Application Security Testing Platform leverages a machine learning technology for intelligent automation of web vulnerability scanning. Complemented by human intelligence, it detects the most sophisticated web application vulnerabilities and comes with zero false-positives SLA.
